Capture Every Step, All in One Upload

Simplify documentation, improve consistency, and create a clear process for capturing proof.

With Step-by-Step Photo Capture, shipments are documented in sequence, guided by customizable steps. Each step can have its own name, required number of photos, and rules. Once complete, everything is uploaded together in a single organized load.

Key Benefits

- ✓

Guided Photo Capture
Each step clearly defines what needs to be photographed, whether it's "Pallet Wrapped – 2 Photos" or "Trailer Sealed – 1 Photo." Nothing important gets skipped.
- ✓

Customizable to Any Operation
Set the number of photos required at each step. Define which steps are mandatory and which are optional. The process adapts to fit specific workflows.

- ✓

One Upload, Fully Organized
Instead of uploading photo after photo, the sequence is completed step by step, then submitted in one clean batch organized, labeled, and tied to the right shipment.
- ✓

Stronger Accountability
Every photo is linked to a specific step and timestamp, leaving no room for confusion. Ideal for compliance, audits, and reducing disputes
- ✓

Consistency Across Sites
Whether managing one facility or many, this feature standardizes the photo process so proof is captured the same way everywhere.

How it works

- 

1. Configure Guided Steps
Define the exact documentation steps for your workflow (such as "Pallet Wrapped" or "Trailer Sealed") including the required number of photos and any special instructions for each step.
- 

2. Capture Photos Step By Step
As each shipment is prepared, the add-on guides the user through each defined step. Required photos are captured at every stage, ensuring all critical details are documented in the correct order according to the workflow.
- 

3. Review And Organize
After all steps are completed, review the captured images within LoadProof. The process ensures that all photos are labeled by step and organized in the correct sequence.
- 

4. One-Click Upload
With one touch, upload all documented steps in a single, organized batch, fully labeled and associated with the correct shipment for effortless access, audit, and sharing.
