A.I. Artificial Intelligence

Handling high volumes of shipments presents challenges, including miscounts, damaged goods, and disputes over what was actually delivered. LoadProof has always helped teams document shipments with clear, verifiable photos and videos. Now, with AI, LoadProof can do more than capture proof; it can analyze, verify, and highlight critical insights automatically, helping teams make faster and smarter decisions.

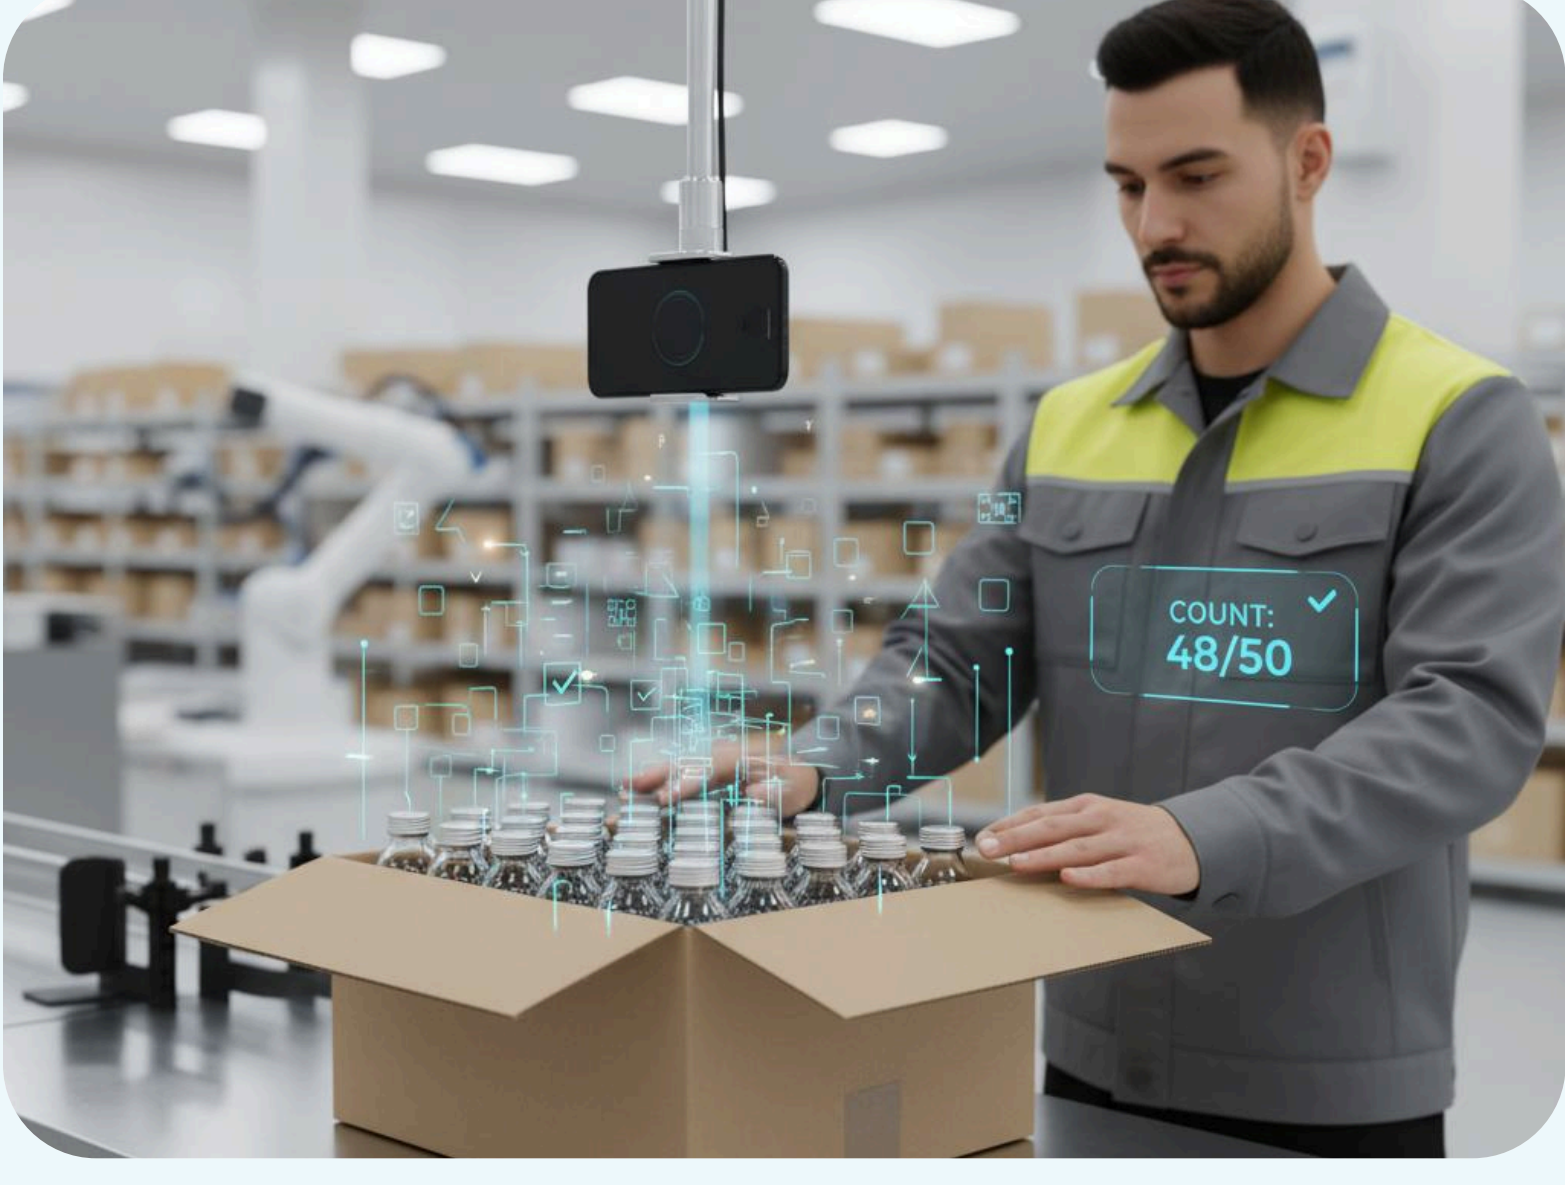

By turning visual evidence into actionable data, teams can identify recurring issues, prevent errors before they escalate, and improve overall operational efficiency. AI-powered insights also reduce reliance on manual checks, freeing up staff to focus on high-value tasks.

Intelligent Item Counting and Verification

Counting items manually is one of those tasks that looks simple but quietly consumes hours, and invites human error. Even the most experienced warehouse associate can miscount when faced with repetitive tasks or complex pallet configurations.

LoadProof AI changes that by introducing Intelligent Item Counting and Verification, a powerful capability that uses AI-driven object detection to automatically identify and count items in every captured image. Whether your team is dealing with uniform cartons, mixed-SKU pallets, or irregularly stacked goods, LoadProof AI detects every visible unit, compares the count to shipment documentation, and highlights discrepancies in seconds.

Automated Data Extraction & Metadata Population

Even in the most modern logistics operations, paper still moves the chain, Bills of Lading, Packing Slips, and Invoices that must be entered, verified, and tracked.

That's hours of repetitive data entry and endless opportunities for error. LoadProof AI eliminates that friction. [Read More...](#)

The AI Extracts Key Fields Such As

- BOL number

Carrier name
- Shipper & consignee details

Reference & load numbers

Technology That Understands How You Work

Technology is only valuable when it fits into the way people actually work. LoadProof AI brings lab-grade intelligence straight to the warehouse floor. There's no need for additional hardware, training, or process changes. Operators capture photos exactly as they do today, while AI works silently in the background, analyzing, verifying, measuring, and extracting in real time.

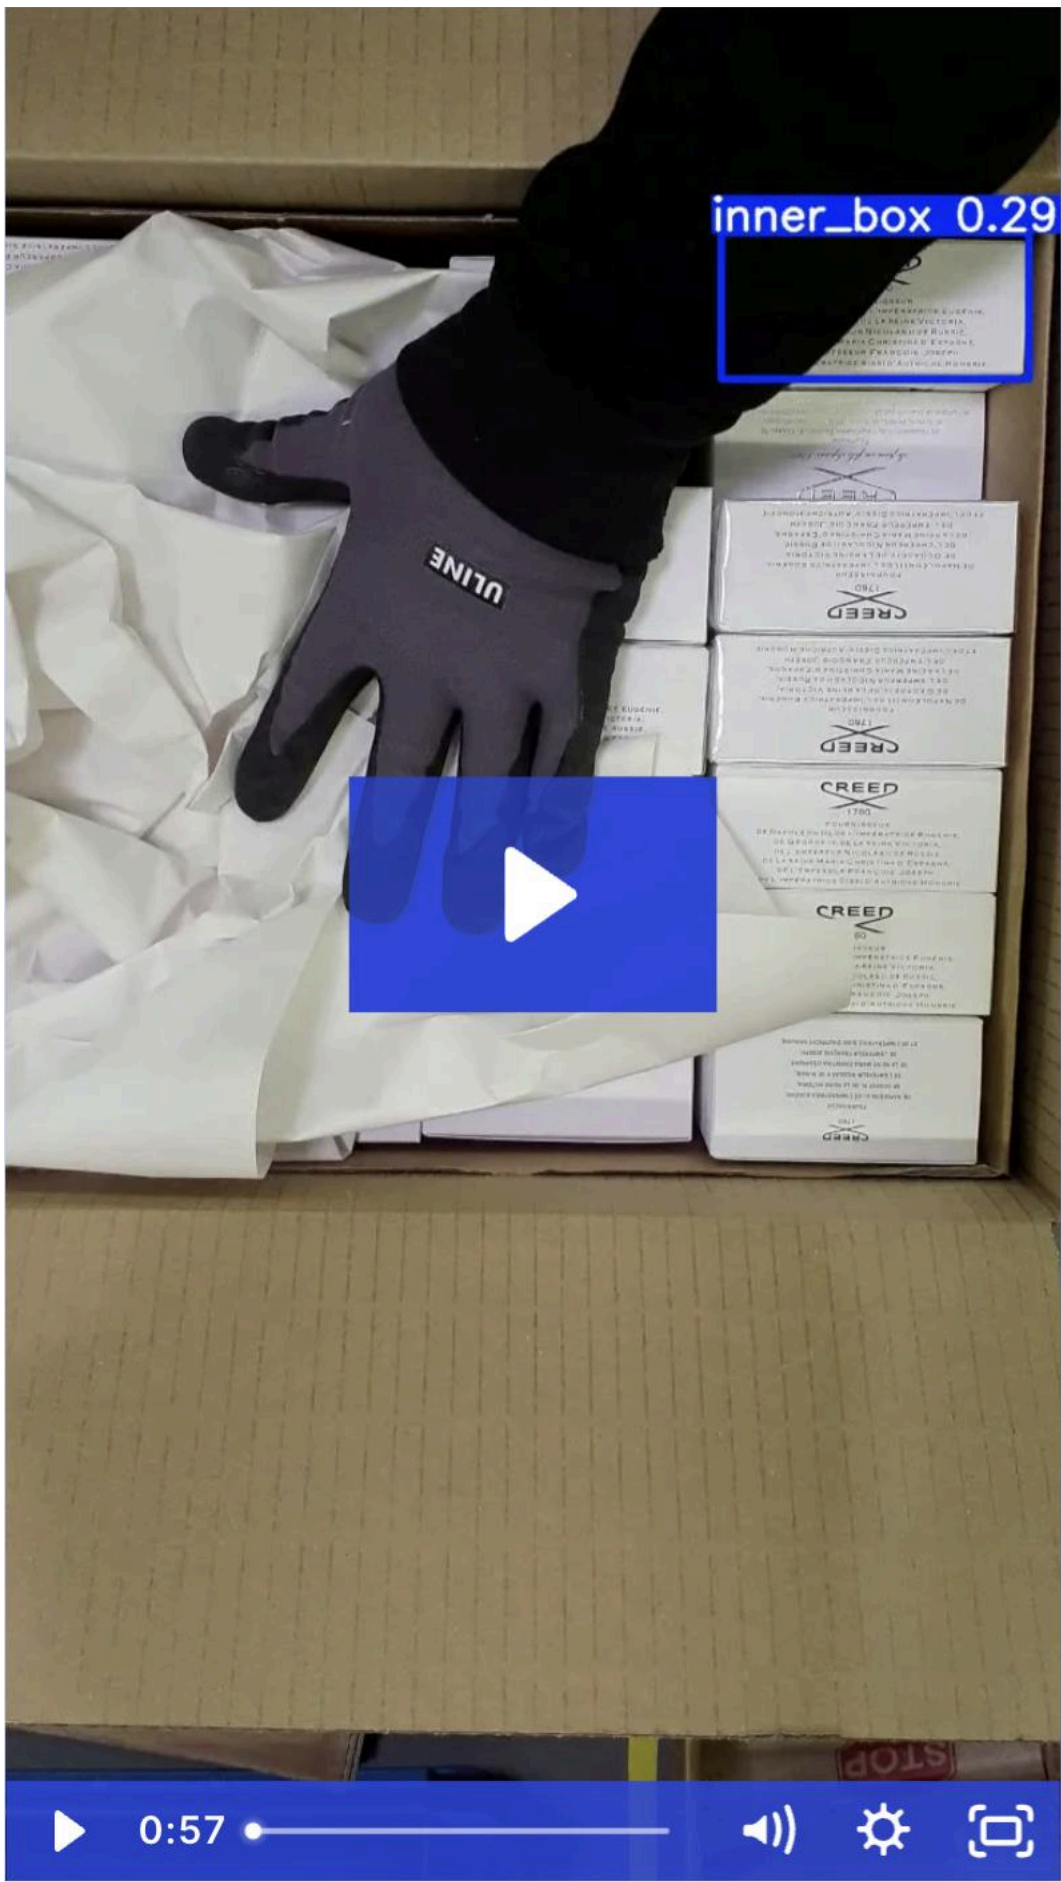

Custom AI Solutions, Built For Real-World Results

We don't just build AI, we build intelligence that works for you. Our team creates purpose-built AI solutions that simplify decisions, sharpen accuracy, and help your operations run smarter every day.
