Automating Proof for Dispute Resolution

High-resolution photo evidence is captured at every critical point in the shipment process. The challenge lies in how quickly that visual proof reaches the Accounts Receivable team to address chargebacks and payment disputes.

The LoadProof + SupplyPike Integration bridges this gap by linking verified photo proof directly with the dispute resolution workflow, enabling instant claim validation, reducing manual effort, and accelerating fund recovery.

Key Benefits of Looping

API-Driven Load Record Access

All uploaded visual documentation for a site can be accessed through a single API request, eliminating the need to log in to the LoadProof application for ad-hoc record checks.

Daily Visibility with Configured Metadata

Shipment information can be filtered by configured metadata, providing relevant data for daily operations, compliance reviews, or exception audits.

Rapid Integration with Supply Pike

Integrate your daily shipment records with SupplyPike effortlessly, creating streamlined workflows that connect LoadProof's secure photo and document capture with real-time insights and automated processes.

How SupplyPike Integration Works

- 

1. Configure Your API Endpoint

Each site is provided a dedicated URL for secure JSON retrieval of uploaded load data.
- 

2. Flexible Metadata Search

Adjust filters to sort records by site, load date, type, or other custom fields making batch reviews and historical lookups simple.
- 

3. No Login Required

Direct access via API means stakeholders, analysts, and partners can check status, verify documentation, without entering the LoadProof app UI.
