LoadProof LITE

Smart Protection for Small Business and Teams

LoadProof Lite gives small operations exactly what they need: a clear, reliable proof of load condition without operational complexity.

Teams can capture, upload, and share shipment documentation quickly using advanced upload options, while automated load emails ensure customers receive instant proof after every shipment. There are no complicated workflows, just focused protection that helps smaller businesses reduce claims, defend revenue, and operate more professionally.

If your goal is simple, consistent documentation that protects every shipment, LITE delivers it.

LoadProof Growth

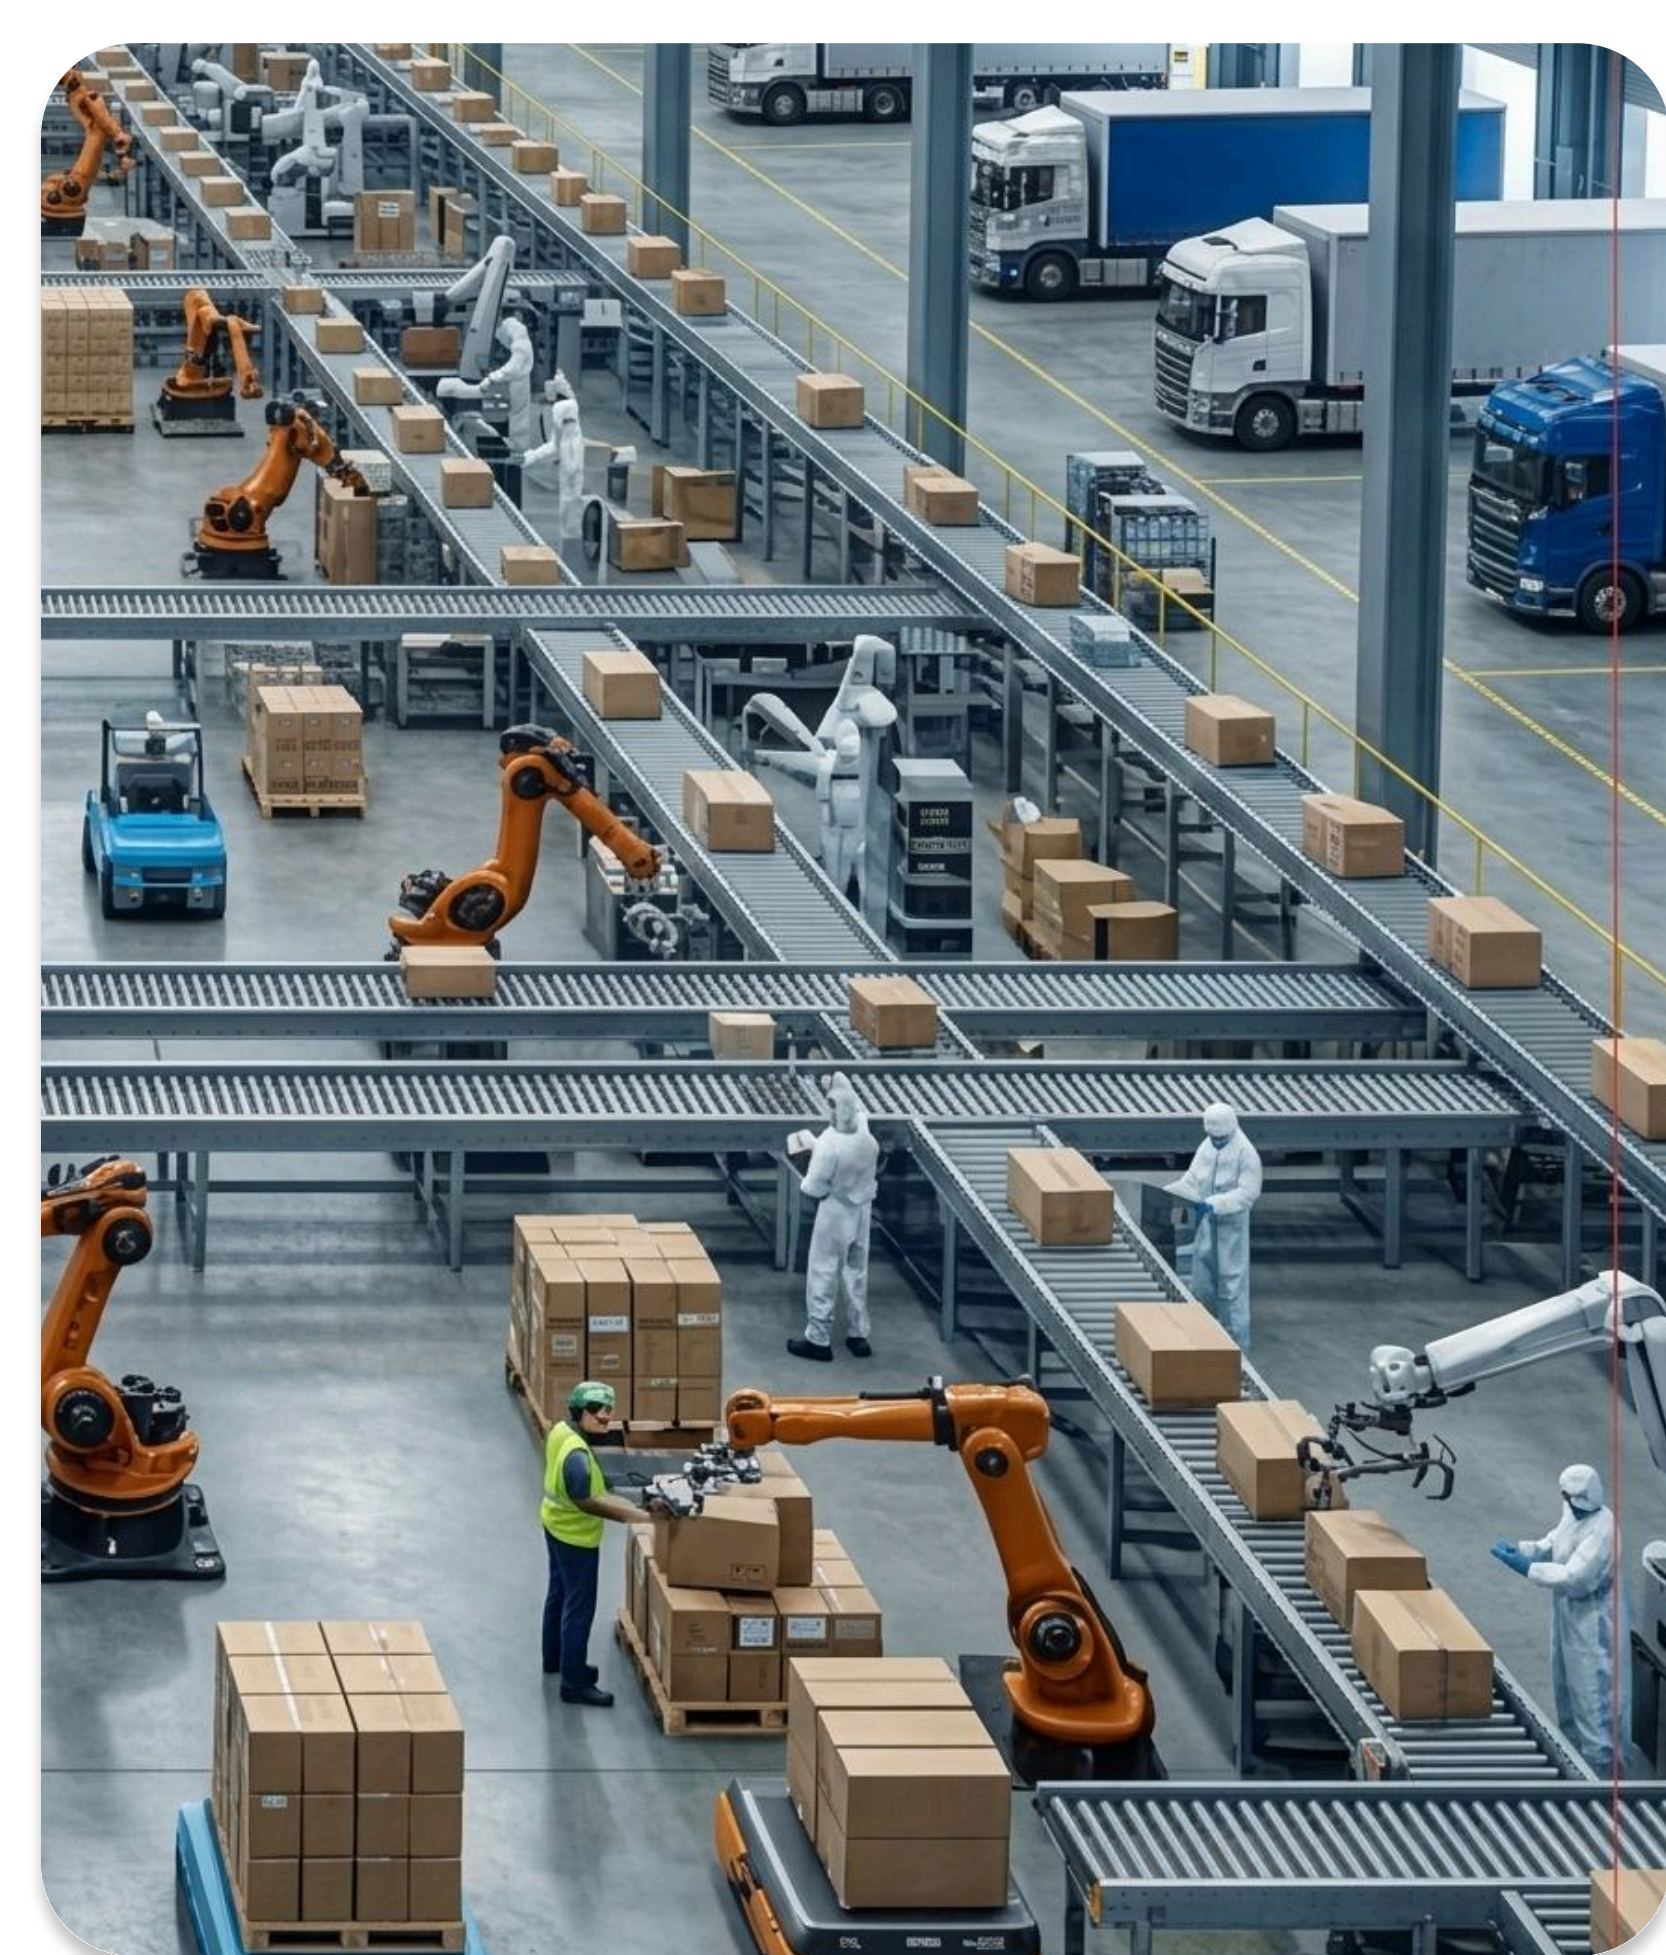

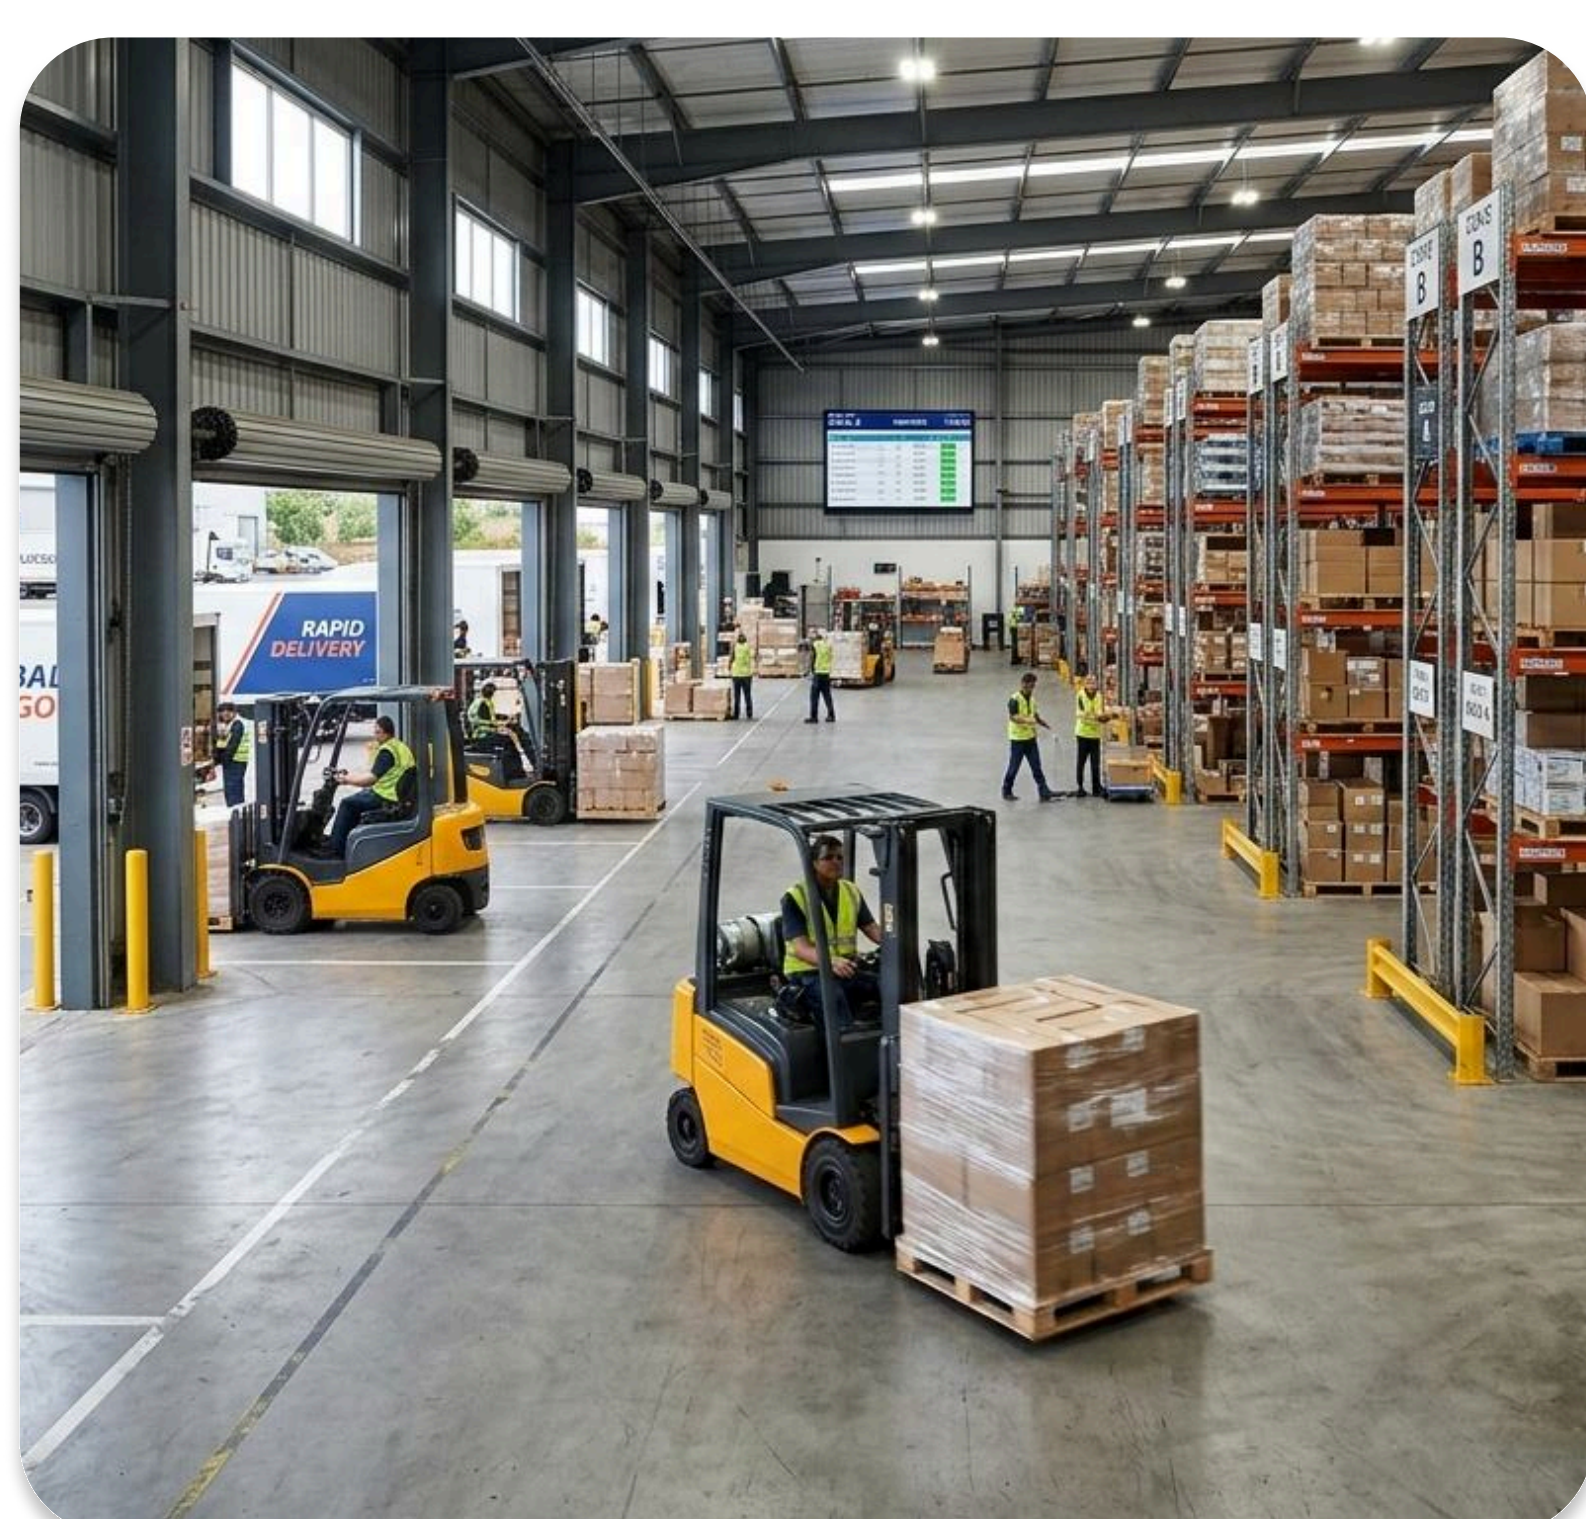

Operational Control for Expanding Businesses

As volume increases, documentation must become consistent, structured, and scalable. Growth introduces stronger process control across teams, locations, and workflows.

Guided Photo Capture ensures every load follows a predefined sequence so nothing critical is missed. Custom Categories allow shipments to be grouped by specific workflows, keeping operations organized and instantly searchable. With built-in CHAT and Lamina annotation tools, teams can communicate in real time and clearly highlight damage or concerns directly on photos.

Growth transforms documentation from basic capture into a controlled, repeatable system that strengthens accountability and reduces costly disputes.

[See the feature chart below for full details.](#)

LoadProof Complete

Comprehensive and Thorough Control and Protection

LoadProof Complete is built for organizations where documentation directly impacts revenue, compliance, and operational risk. As operations scale across multiple facilities, even small documentation gaps can create significant exposure. Complete is designed to remove that uncertainty.

With SOC 2 Type II security standards, your data is protected by independently verified enterprise-grade controls. Advanced digital Forms replace paper-based audits and inspections, capturing time-stamped records with synced photos for complete compliance visibility. Extend functionality ensures documentation continues beyond the warehouse, allowing drivers and external partners to submit proof instantly through secure QR-based access.

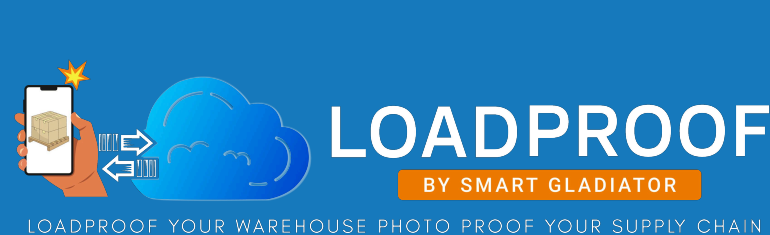

Combined with deeper system integrations and centralized controls, Complete delivers standardized, audit-ready documentation across every site.

When documentation becomes mission-critical, Complete ensures protection at scale.
