

Load Record Mailer

Automatically Share Load Documentation With The Right People At The Right Time

Automated Load Record Emailing: Share Shipment Proof the Moment Documentation Is Complete

A customer emails asking for proof of shipment. Someone on your team stops what they are doing, searches for the load, copies the link, and sends the email. Then the carrier asks. Then the internal stakeholder wants a copy. Then the next customer follows up.

The process repeats dozens of times a week. Each email is small. The real cost lies in the time lost, the communication delays, and the missed opportunities to keep stakeholders informed.

Automated load record emailing removes the manual step entirely. LoadProof Load Record Mailer matches shipment metadata to pre-configured recipients and delivers load records automatically when documentation is complete. Proof should move as fast as the shipment itself. Automatically deliver load records to customers, carriers, and stakeholders the moment documentation is complete.

Metadata based email matching uses sales orders, shipment numbers, or any custom field to route the right record to the right inbox. Multi-stage workflows ensure documentation is shared only when the entire process is complete, providing stakeholders with a complete and accurate record of the shipment.

What Load Record Mailer Delivers

- 

1. Automated Load Record Distribution

Automatically deliver LoadProof load records to pre-configured recipients when shipment documentation is complete. It eliminates the repetitive task of locating and sharing documentation. The system sends and your team stays focused on operations.
- 

2. Metadata Based Email Matching

Metadata-driven routing automatically matches shipment documentation with the appropriate recipients, ensuring customers, carriers, and stakeholders receive the records relevant to them.
- 

3. Multi Stage Workflow Notifications

Support multi-stage workflows by linking related categories together. These notifications trigger only when the final stage finishes, packing, inspection, staging, loading, shipping. Recipients receive the complete documentation package, not a partial record that generates follow-up questions.
- 

4. Multi-Recipient Notifications

Share load records with multiple customers, carriers, suppliers, and internal stakeholders simultaneously. Load record distribution covers everyone who needs proof, not just the first person on the email chain.
- 

5. Customer Shipment Visibility

Give customers immediate access to load records and visual proof, helping them stay informed throughout the shipment process. Greater visibility strengthens trust, improves communication, and reduces the need for follow-up requests.
- 

6. Delivery Status Tracking

Monitor email delivery status and maintain visibility into which records have been shared. Automatic proof of shipment delivery with confirmation that the message landed.

Why Operations Teams Use

Manual communication does not scale. Every new customer, every new carrier, every new facility adds more emails to send, more records to locate, more chances to forget.

Automated emailing scales without adding headcount. Reduce repetitive communication tasks. Improve customer visibility. It accelerates information sharing, strengthens accountability, and turns documentation into communication automatically.

Capturing proof is important and sharing it is what drives visibility. Stop playing mail clerk for your own shipment records. Automated load record emailing delivers proof to the right people the moment documentation is complete, without your team touching a single email.
