

Yard Management System (YMS)

Simplify Appointment Scheduling, Driver Check-Ins, Dock Assignments, And Yard Operations With A Centralized Platform That Keeps Every Movement Visible From Arrival To Departure.

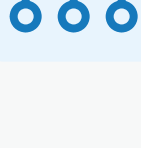

One Connected View of Your Entire Yard

Every truck entering your facility sets off a series of activities. Appointments need to be scheduled, drivers checked in, dock doors assigned, and shipments loaded on time. When these tasks are managed across spreadsheets, phone calls, emails, or disconnected systems, delays become inevitable and visibility suffers.

LoadProof Yard Management System (YMS) brings every stage of yard operations together in one platform. From the moment an appointment is scheduled until the truck leaves the facility, every activity is connected, visible, and easy to manage.

How Yard Management system YMS Works

1. Keep Every Appointment Organized

LoadProof YMS centralises warehouse appointments in a shared calendar, helping teams schedule inbound and outbound deliveries, manage availability, and coordinate arrivals. With one reliable schedule, warehouses avoid overlapping bookings, unexpected arrivals, and missed time slots—making planning simpler, reducing dock congestion, and keeping operations running smoothly.

2. Know What's Happening Across The Yard

LoadProof YMS gives warehouse teams real-time visibility into appointments, truck arrivals, dock assignments, and yard activity through one centralized dashboard. Managers can identify delays, monitor available dock doors, and make informed decisions faster—keeping freight moving efficiently without repeatedly checking with multiple teams.

3. Streamline Driver Check-In And Dock Coordination

LoadProof YMS streamlines driver check-ins by enabling teams to verify appointments, record driver details, and coordinate dock assignments in one place. Drivers move through the facility faster, while warehouse teams reduce paperwork, manual communication, and delays.

4. Improve Dock Utilization

LoadProof YMS helps warehouse teams optimize dock assignments, balance appointments, and reduce wait times. With clear visibility into dock availability, facilities can improve throughput, minimize idle doors, and keep daily operations moving efficiently without added complexity.

5. Maintain Complete Operational Visibility

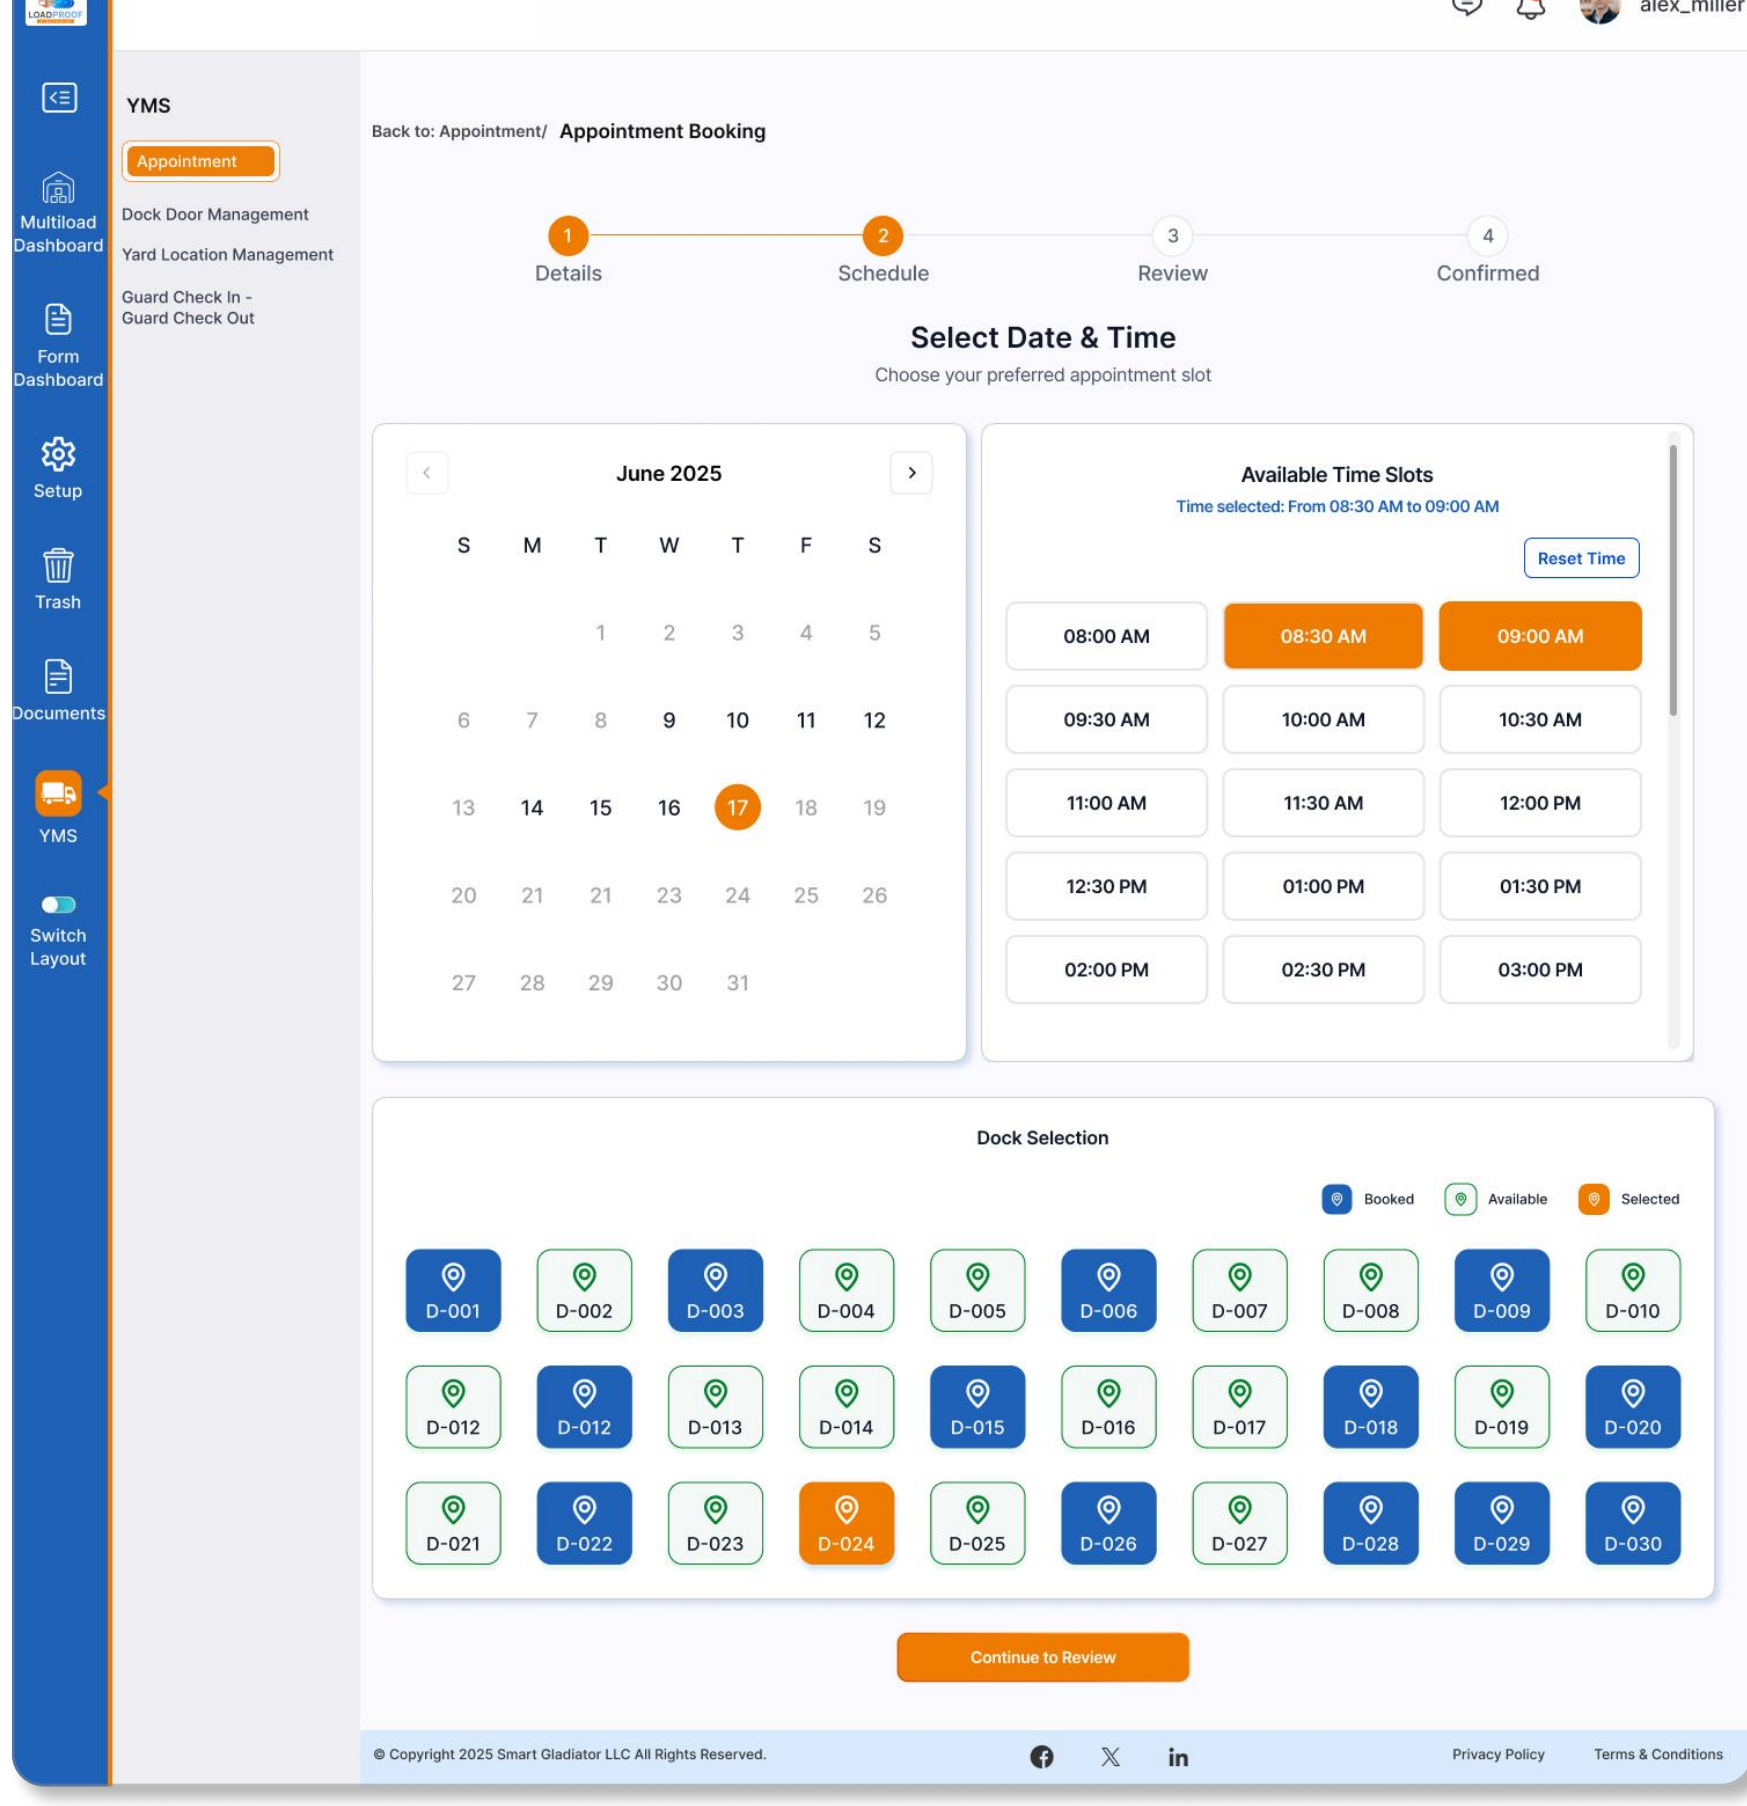

LoadProof YMS creates a complete record of every appointment, check-in, dock assignment, and status update. Teams can review activity, investigate delays, prepare for audits, and understand exactly what happened throughout each visit.

6. Built To Work With LoadProof

LoadProof YMS enhances your existing LoadProof platform by managing appointments, yard activity, and dock coordination. Combined with LoadProof's visual shipment documentation, it creates a connected record from truck arrival to loading and departure—delivering greater visibility and stronger documentation across the warehouse workflow.

Key Capabilities

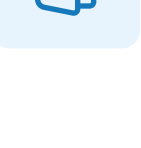

Appointment Scheduling

Schedule inbound and outbound appointments from one centralized calendar to improve planning and reduce congestion.

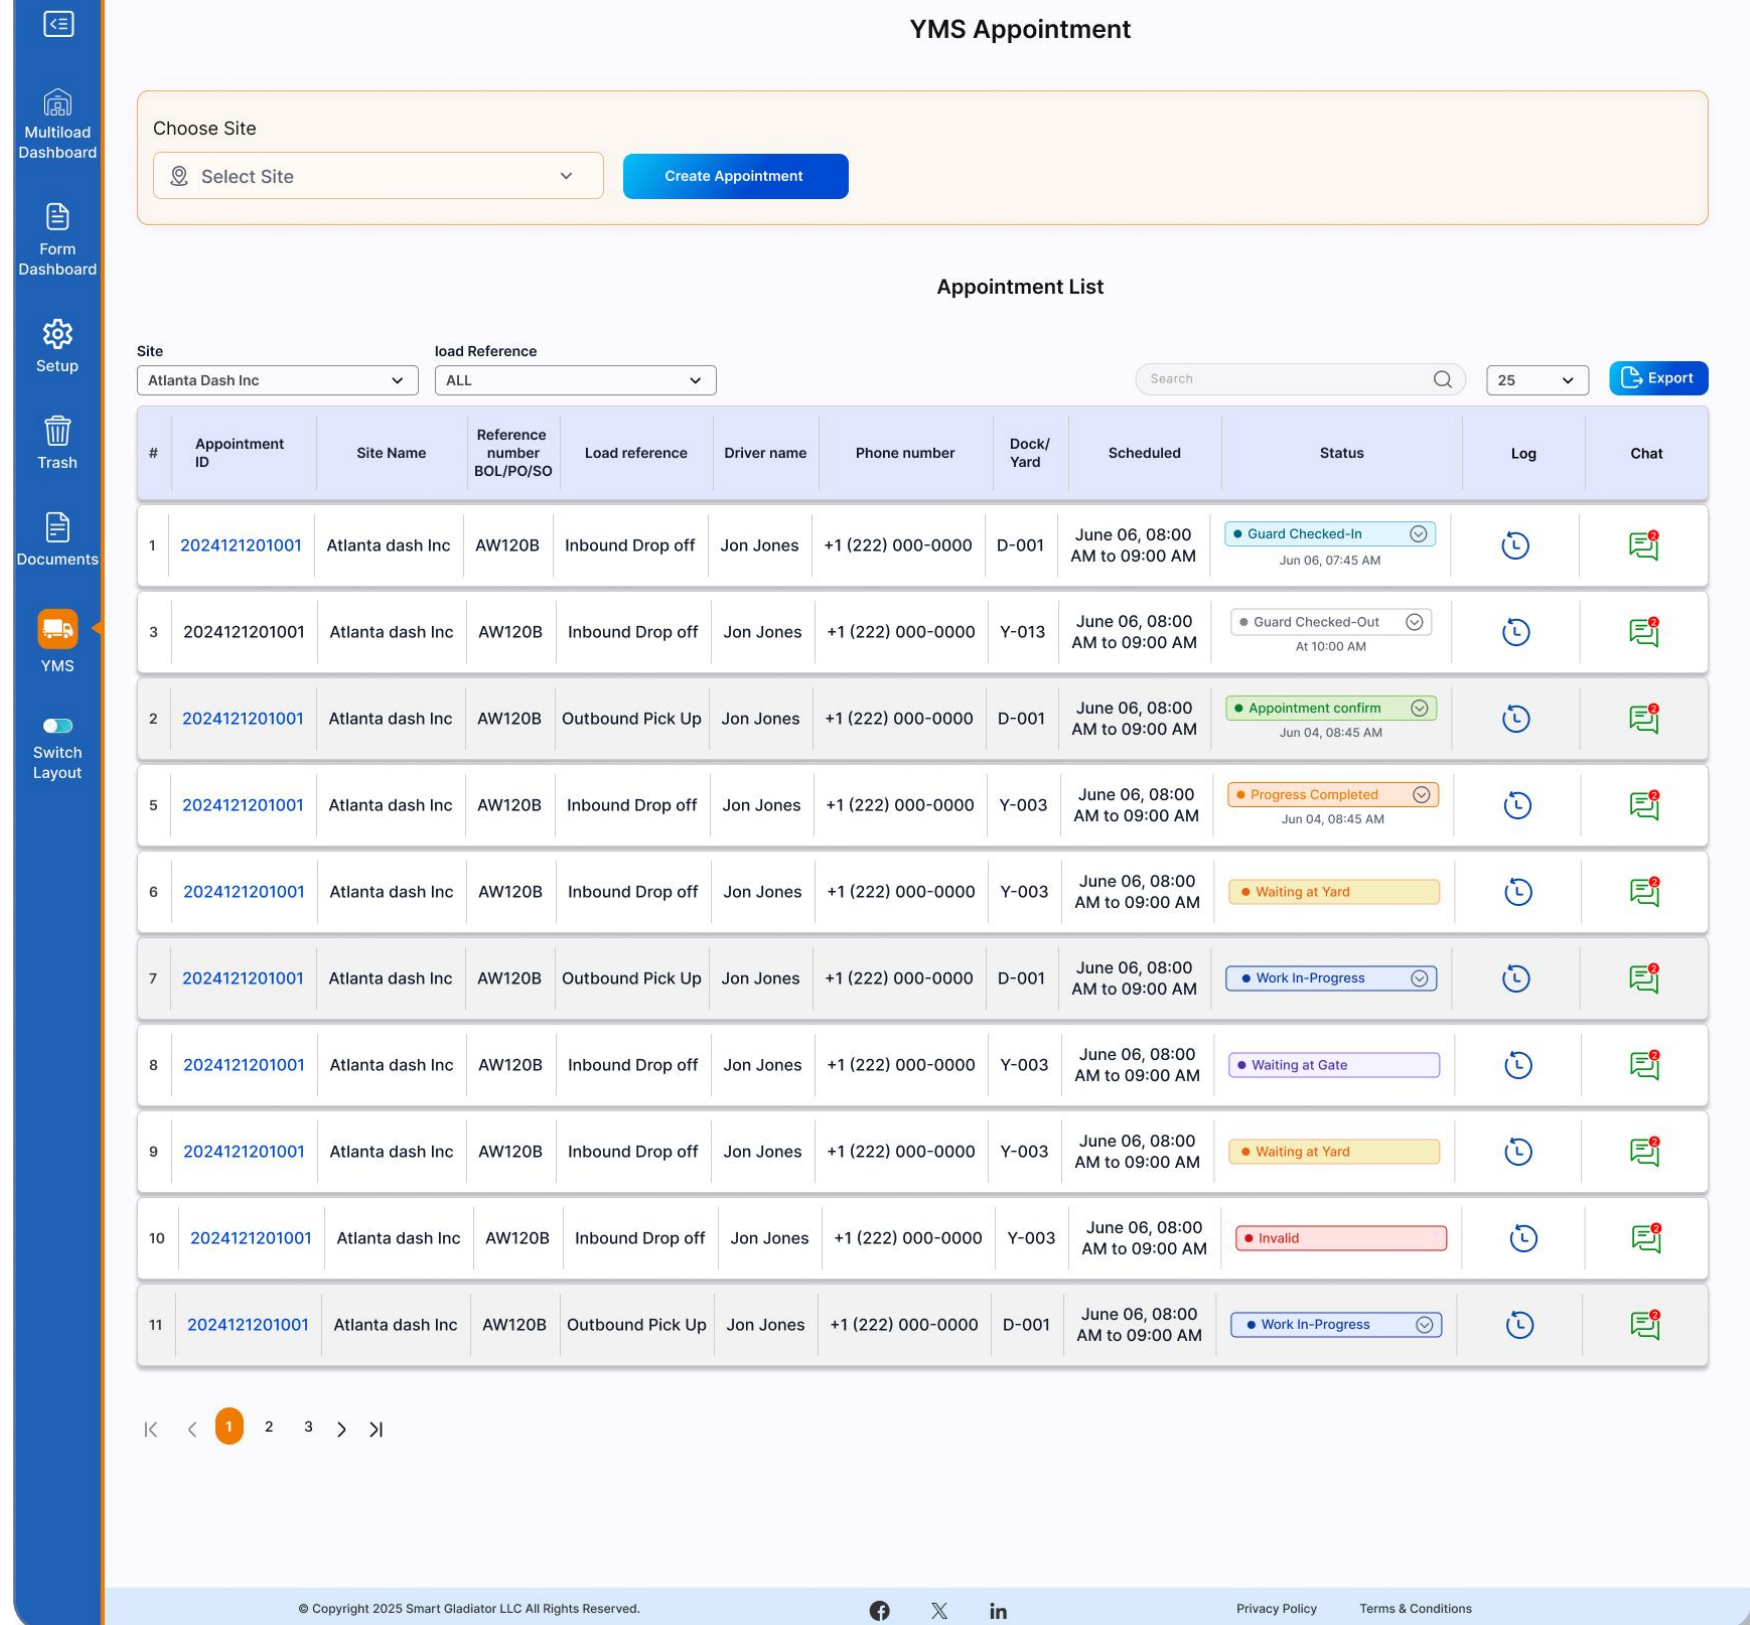

Driver Check-In & Check-Out

Streamline driver verification and maintain an accurate record of every arrival and departure.

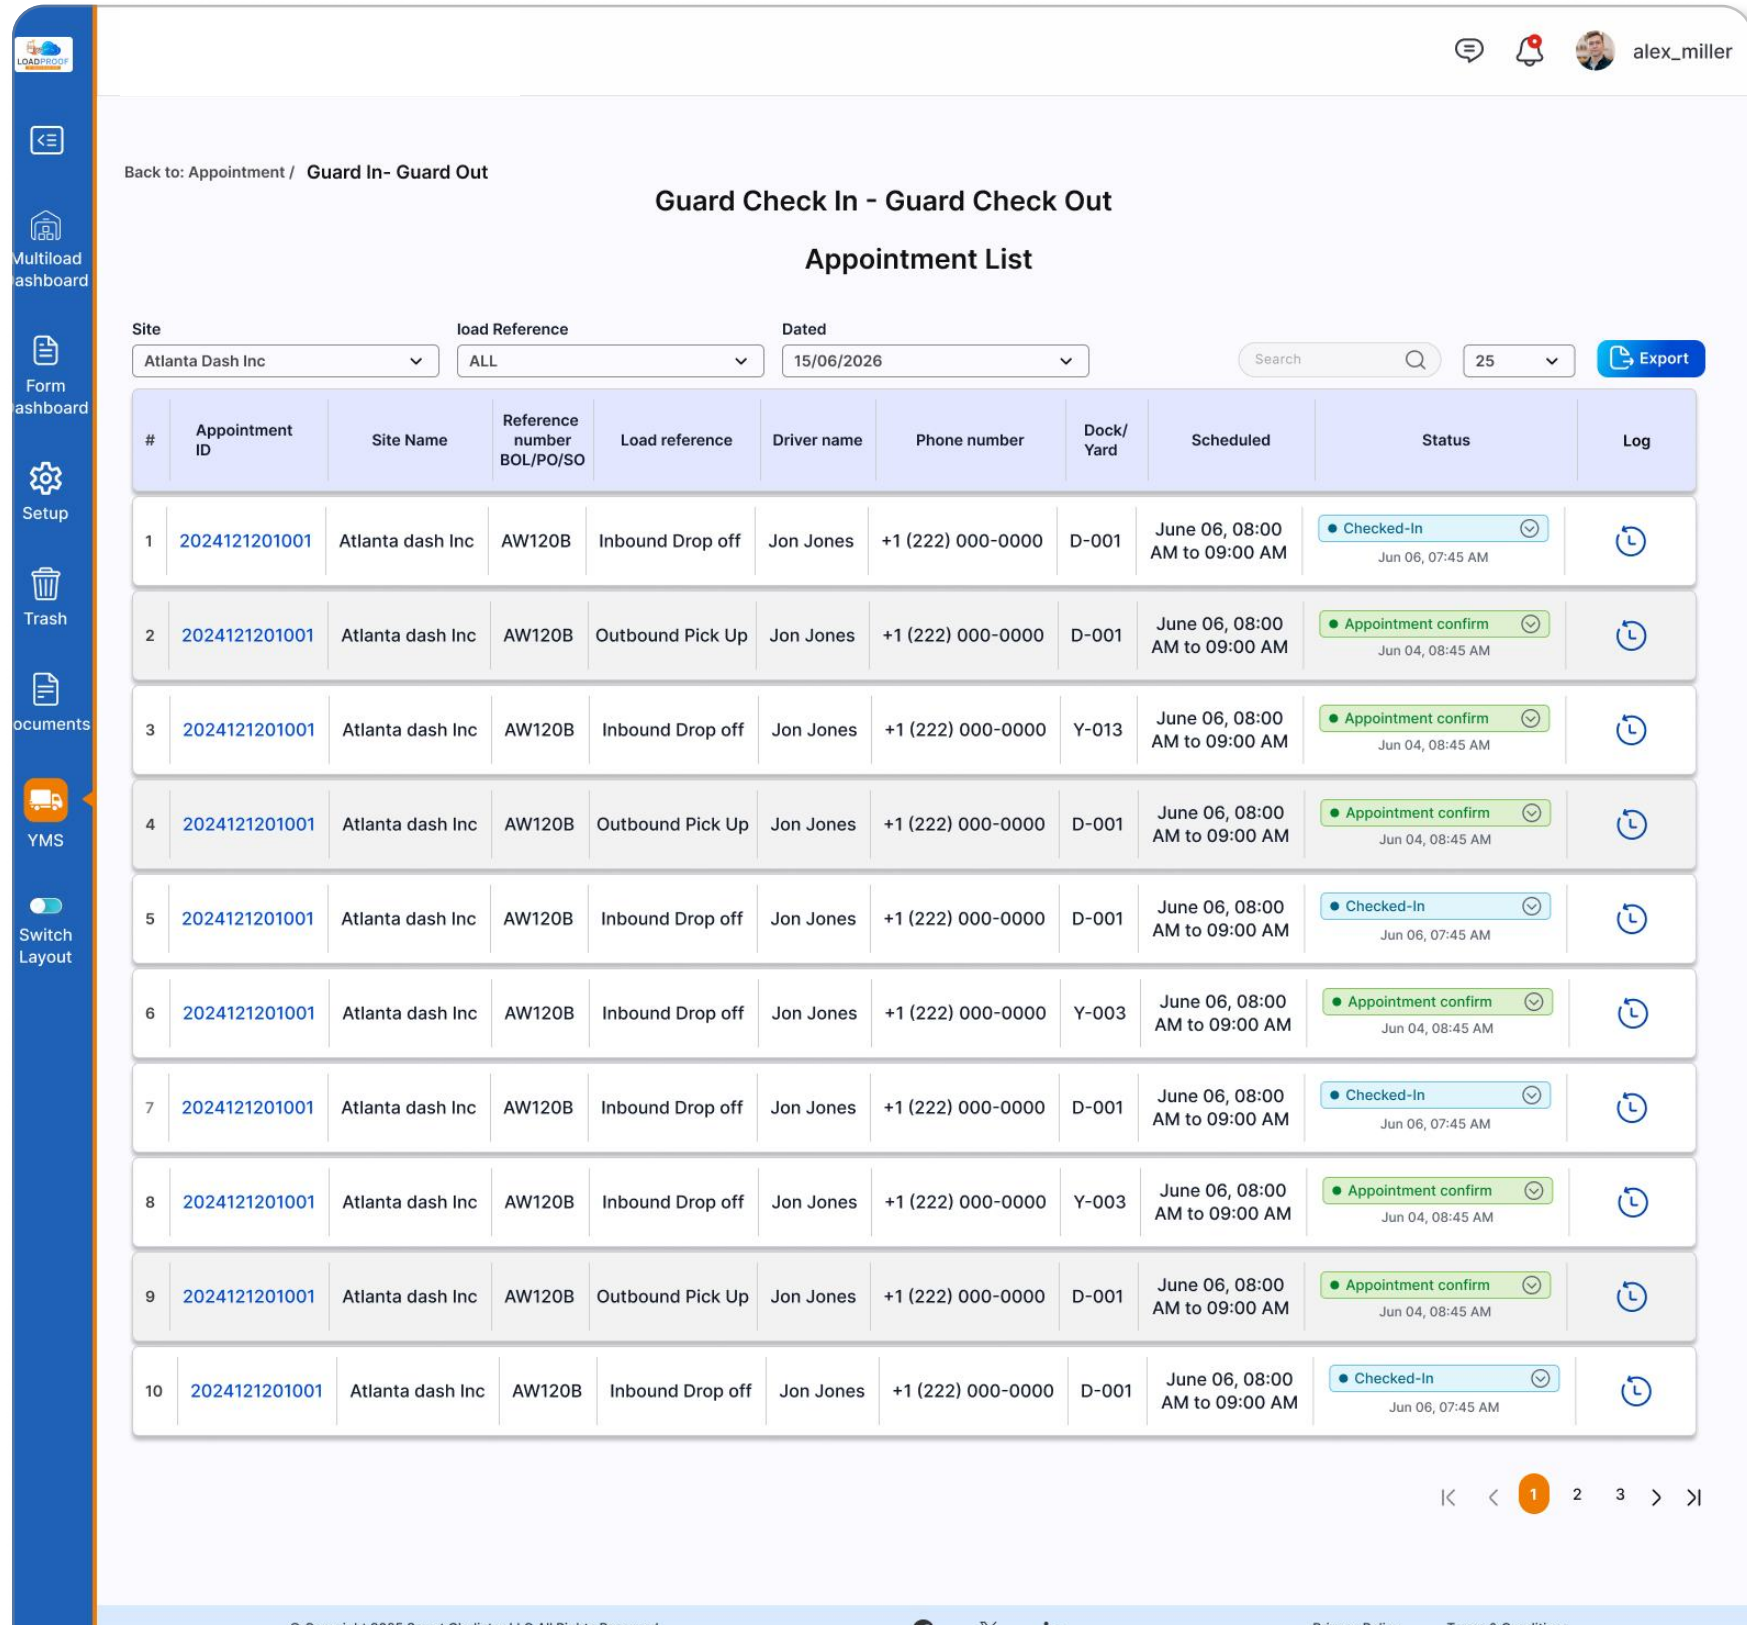

Dock Door Management

Assign dock doors efficiently while monitoring availability and utilization in real time.

Yard Activity Tracking

Track truck movements, appointment status, and operational progress throughout the facility.

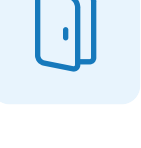

Real-Time Operational Dashboard

Monitor appointments, dock activity, and yard operations from a centralized view.

Automated Driver Notifications

Keep drivers informed with automated SMS notifications and appointment updates.

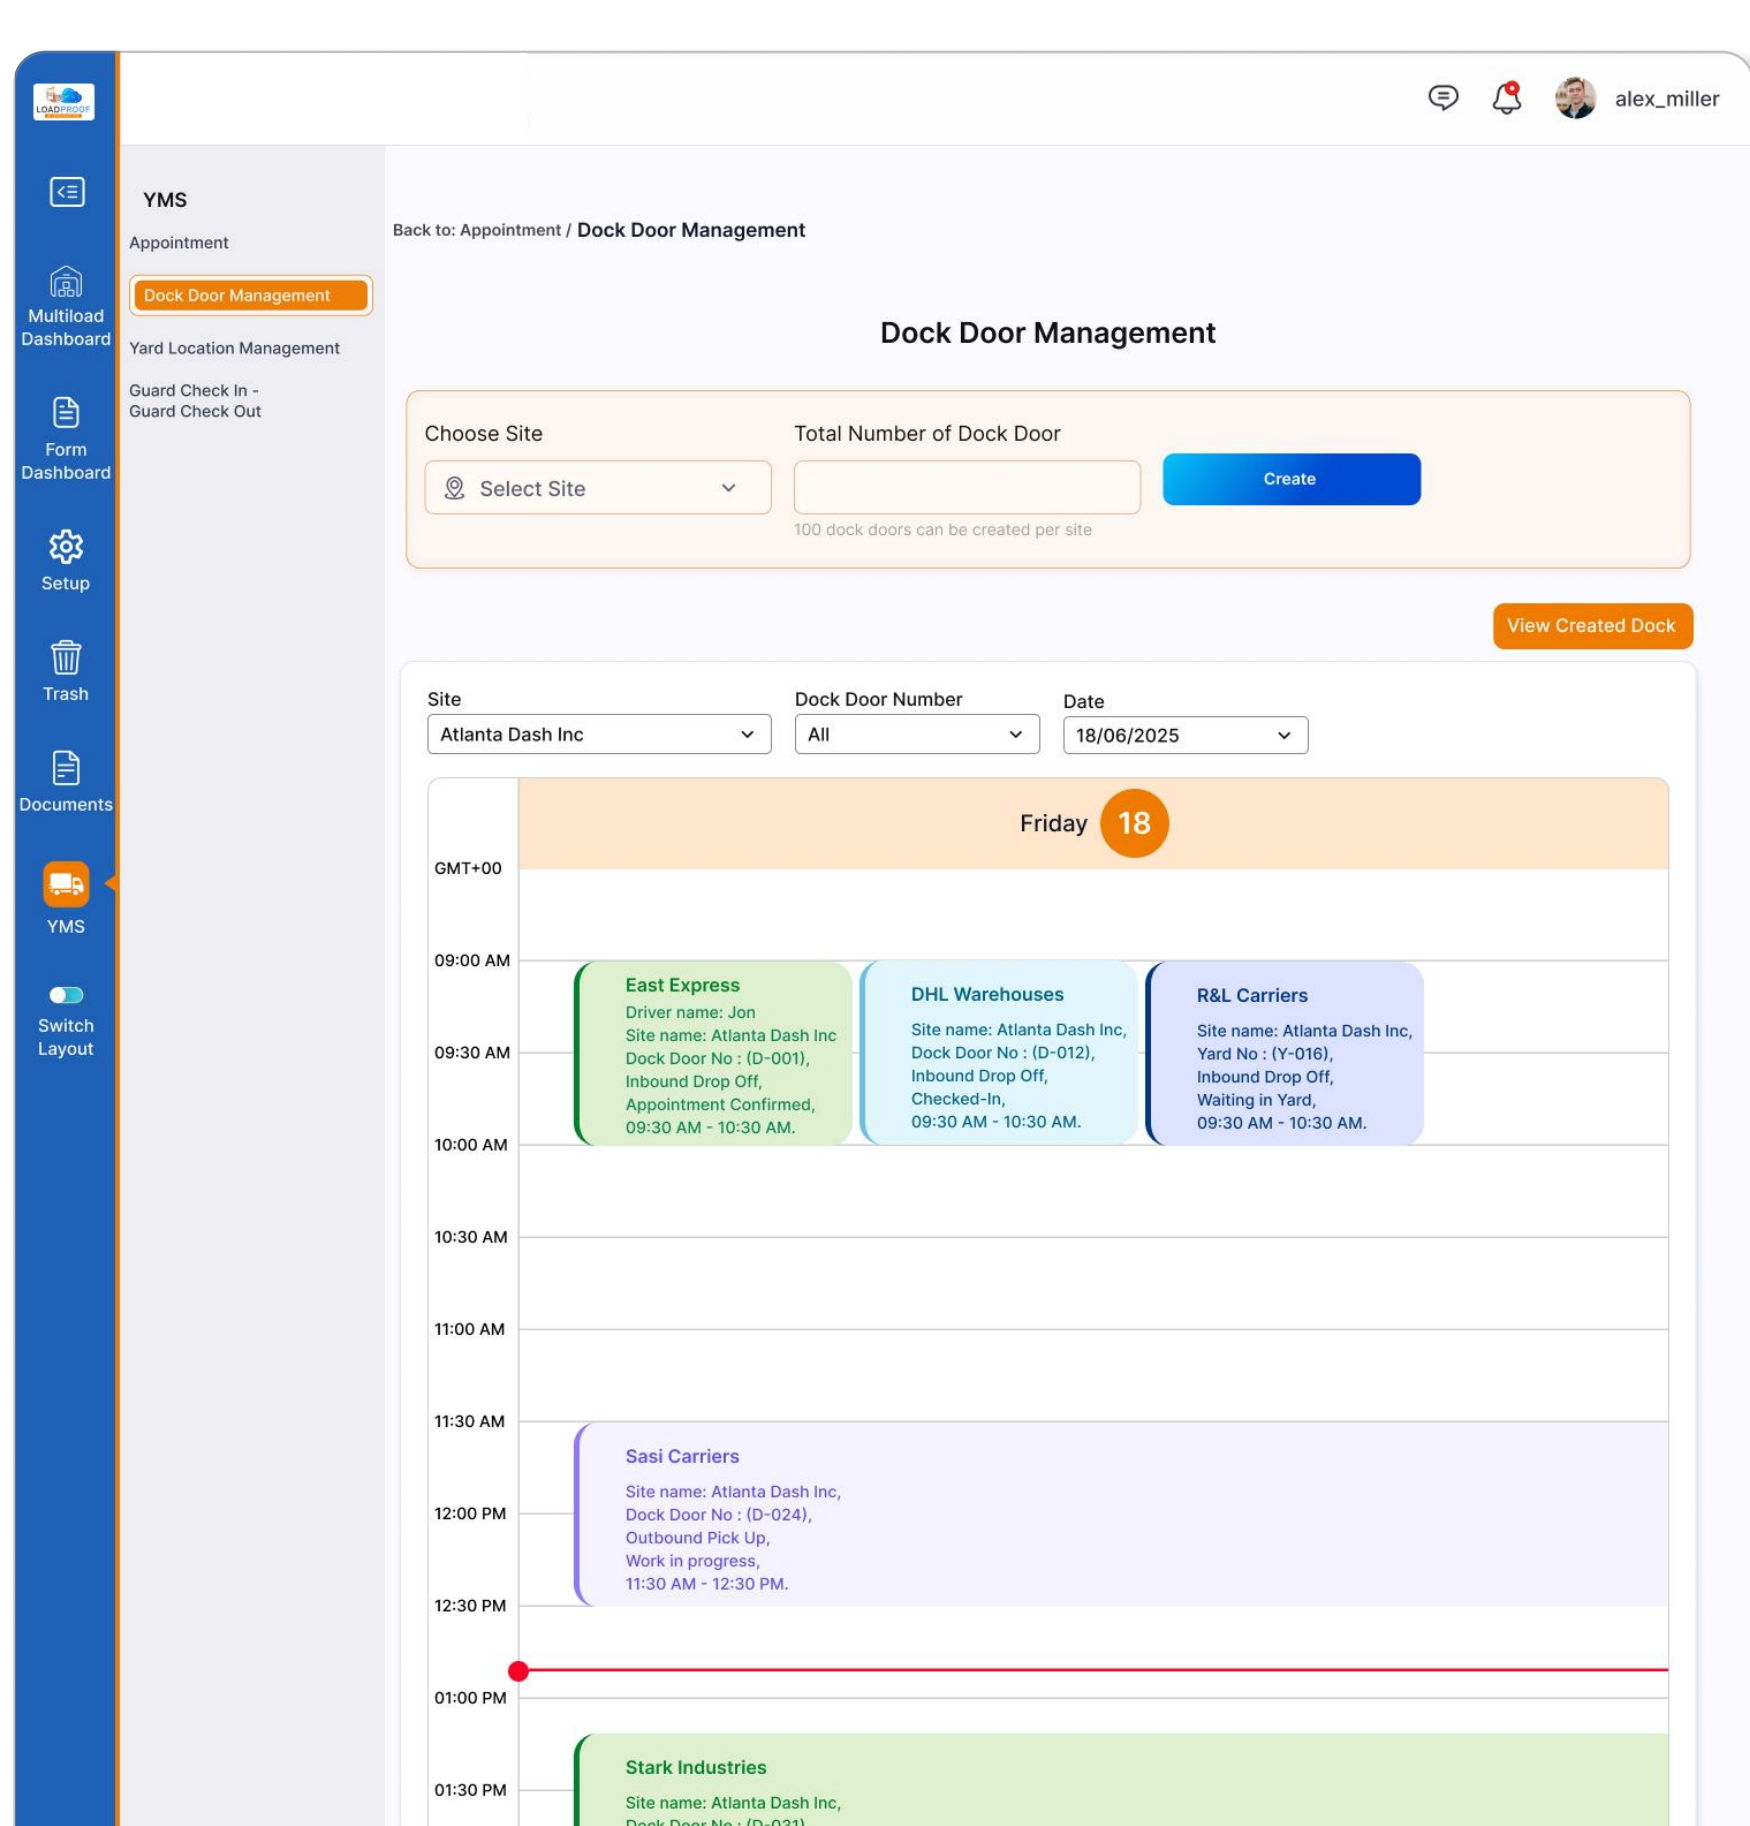

Complete Audit History

Maintain a detailed record of appointments, status changes, and operational events for better visibility and accountability.

Native LoadProof Integration

Connect yard operations with LoadProof's photo documentation to create a complete record from arrival through shipment.

Why Warehouse Teams Choose LoadProof YMS

- Gain real-time visibility into yard operations
- Improve appointment scheduling and dock utilisation
- Reduce driver wait times and manual coordination
- Streamline communication between guards, warehouse teams, and drivers
- Maintain a complete operational history for every visit
- Extend LoadProof beyond shipment documentation into yard operations

A well-managed yard keeps trucks moving, dock doors productive, and warehouse teams informed.

LoadProof Yard Management System gives operations teams the visibility and coordination they need to manage appointments, drivers, dock assignments, and yard activity from one connected platform, helping facilities operate more efficiently from arrival to departure.
