Yard Management System (YMS) and Dock Scheduling System (DSS)

Cargo theft doesn't need broken locks, just the right paperwork

Cargo theft doesn't always break in. Increasingly, it's a driver who pulls up with a bill of lading that looks right, a company name that sounds right, and an appointment window that lines up just close enough to pass a rushed check at the gate. By the time anyone realizes the paperwork was fabricated, the trailer is already gone.

This is the reality warehouse and yard teams are up against today: theft by deception, not force. Fraudulent carrier identities, spoofed appointment confirmations, and forged documents are being used to walk straight through the front door of facilities that rely on manual checks, phone calls, and spreadsheets to verify who's actually supposed to be there.

When appointment data lives in one system, guard logs live in a notebook, and dock assignments get shouted over the radio, there's no single source of truth anyone can check against at the moment. That moment of limited visibility creates an opportunity cargo thieves are quick to exploit.

Securing the Entire Warehouse Premises, Not Just the Dock Door

Stopping this kind of theft means securing every point where a truck, driver, or trailer touches your facility, not just the loading dock:

- **Yard locations** - knowing exactly which trailers and trucks are on your property, where, and why, at all times
- **Dock doors** - ensuring only verified, appointment-matched carriers are assigned a door and allowed to load or unload
- **Guard check-in and check-out stations** - giving guards a real-time way to confirm a driver and appointment match before ever waving a truck through
- **The full premises** - connecting scheduling, arrival, dock activity, and departure into one record so nothing moves through your yard unverified or unaccounted for

When these checkpoints are disconnected, each one becomes a weak point on its own. When they're connected, your yard becomes a system that verifies identity and appointment data at every stage, not just a location that hopes for the best at the gate.

What It Means for Your Warehouse: Automating Verification with AI Auto-Tagging

Every manual step in the check-in process is a step someone can talk their way around. A guard reading a printed appointment confirmation, a clerk typing a DOT number by hand, a driver's word taken at face value, each one is a moment where fabricated paperwork can slip through.

LoadProof's AI Auto-Tagging closes that problem by capturing and verifying the information that matters the moment a truck arrives, without waiting on a person to key it in:

- Automatically recognizes truck arrivals as they arrive the yard
- Scans and captures the DOT# (Department of Transportation Number) directly off the vehicle
- Scans and captures the MC# (Motor Carrier Number) directly off the vehicle
- Uses this information to automate the full check-in and check-out process at the gate

Real-Time Verification, Before a Truck Ever Reaches the Dock

Capturing the data is only half the picture. LoadProof also verifies it in real time, against the people who are actually responsible for confirming who should be on your property:

- Real-Time validation of driver's license at check-in
- Real-Time driver verification with freight brokers, so the broker can confirm that the driver in front of your gate is the driver they actually dispatched
- Real-Time validation of carrier identity, DOT#, and MC# for freight broker approval before a truck is allowed to proceed.
- Automated guard check-in and check-out, so guards are confirming a match instead of relying a visual check of printed paperwork

One Connected View of Your Entire Yard

Every truck entering your facility sets off a series of activities. Appointments need to be scheduled, drivers checked in, dock doors assigned, and shipments loaded on time. When these tasks are managed across spreadsheets, phone emails, or disconnected systems, delays become inevitable, verification gets skipped, and visibility suffers.

LoadProof Yard Management System (YMS) and Dock Scheduling System bring every stage of yard operations together in one platform. From the moment an appointment is scheduled until the truck leaves the facility, every activity is connected, verified, visible, and easy to manage.

Keep Every Appointment Organized

Appointments are the starting point of every successful warehouse operation. Without a centralized dock scheduling system, overlapping bookings, unexpected arrivals, and missed time slots quickly disrupt dock operations, and create the exact confusion cargo thieves rely on.

LoadProof YMS provides a shared appointment calendar where warehouse teams can schedule inbound and outbound deliveries, manage availability, and coordinate arrivals more effectively. With everyone working from the same schedule, planning becomes easier, dock congestion is reduced, and every arrival can be checked against a real appointment.

Know What's Happening Across the Yard

Warehouse managers shouldn't have to call multiple teams to understand what's happening outside the building. LoadProof YMS provides real-time visibility into appointments, truck arrivals, dock assignments, and yard activity from a centralized dashboard. Operations teams can quickly identify delays, spot mismatches between who arrived and who was expected, monitor available dock doors, and make informed decisions to keep freight moving efficiently and securely.

Streamline Driver Check-In and Dock Coordination

Driver arrivals shouldn't slow down warehouse operations, and they shouldn't be a blind trust exercise either. LoadProof YMS simplifies the check-in process by helping warehouse teams verify appointments, record driver information, and coordinate dock assignments from one place. Drivers move through the facility faster, warehouse teams spend less time managing paperwork and manual communication, and guards have a real system to check against instead of a driver's word.

The Impact on Your Yard

Improve Dock Utilization

Every idle dock door represents lost productivity.

LoadProof YMS helps warehouse teams assign dock doors more efficiently, balance appointments throughout the day, and reduce unnecessary waiting times. With better visibility into dock activity, facilities can improve throughput without adding complexity to daily operations.

Maintain Complete Operational Visibility

Every appointment, check-in, dock assignment, and status update becomes part of a complete operational record.

Whether you're reviewing yesterday's activity, investigating a delay, or investigating a suspected theft attempt, LoadProof YMS gives you the historical visibility needed to understand exactly what happened throughout the lifecycle of every visit.

Built to Work with LoadProof

LoadProof YMS and Dock Scheduling System run as a standalone platform on their own, with nothing else required to get started. For teams already using LoadProof, YMS also connects easily with the core platform to extend it further.

While YMS handles appointments, yard operations, and dock coordination, LoadProof captures the visual documentation behind every shipment. Together, they create one connected operational record from truck arrival through loading and departure that gives warehouse teams greater visibility, tighter security, and stronger documentation across the entire workflow.

Key Capabilities

Appointment Scheduling & Dock Scheduling

Schedule inbound and outbound appointments from one centralized calendar to improve planning, reduce congestion, and flag unverified arrivals.

Driver Check-In & Check-Out

Streamline driver verification and maintain an accurate record of every arrival and departure.

Dock Door Management

Assign dock doors efficiently while monitoring availability and utilization in real time.

Yard Activity Tracking

Track truck movements, appointment status, and operational progress throughout the facility.

Real-Time Operational Dashboard

Monitor appointments, dock activity, and yard operations from a centralized view.

Automated Driver Notifications

Keep drivers informed with automated SMS notifications and appointment updates.

Complete Audit History

Maintain a detailed record of appointments, status changes, and operational events for better visibility, accountability, and theft investigation.

Native LoadProof Integration

Connect yard operations with LoadProof's photo documentation to create a complete record from arrival through shipment.

Why Warehouse Teams Choose LoadProof YMS and Dock Scheduling System

1. Protect Your Yard, Dock Doors & Guard Stations

Strengthen security across critical access points with continuous monitoring and controlled entry. Verify vehicles, personnel, and shipments to prevent cargo theft, fraud, and unauthorized activity.

2. Gain Real-Time Visibility Into Yard Operations

Monitor yard activity in real time to track vehicle movements, loading progress, and dock activity. Improve operational awareness, reduce delays, and keep every movement visible from arrival to departure.

3. Improve Appointment & Dock Scheduling

Streamline appointment scheduling and dock assignments to keep inbound and outbound operations running smoothly. Maximize dock utilization, reduce wait times, and ensure efficient movement of vehicles and cargo.

4. Reduce Driver Wait Times & Manual Coordination

Automate driver check-ins, appointment updates, and dock assignments to minimize delays and unnecessary coordination. Keep drivers moving efficiently while giving teams real-time visibility into every arrival and departure.

5. Streamline Communication Across Teams

Connect guards, warehouse teams, and drivers with clear, real-time updates throughout the yard and dock operations. Reduce communication gaps, improve coordination, and keep everyone aligned from arrival to departure.

6. Maintain A Complete Operational History

Capture and organize every visit, movement, and activity in one centralized record. Access a complete history of vehicles, drivers, appointments, and dock activity for better tracking and accountability.

7. Extend LoadProof Into Yard Operations

Expand LoadProof beyond shipment documentation to manage and monitor critical yard activities in real time. Connect yard, gate, dock, and shipment workflows for greater visibility, control, and operational efficiency.

Talk to Our Solution Expert

Bring every truck, driver, and dock together with real-time visibility and smarter yard coordination.

Secure Yard Operations. Keep Every Move on Track.

A secured yard keeps trucks moving, dock doors productive, and warehouse teams informed, and keeps thieves with fake paperwork out.

LoadProof Yard Management System and Dock Scheduling System give operations teams the visibility and coordination they need to manage appointments, drivers, dock assignments, and yard activity from one connected, secure platform, helping facilities operate more efficiently and safely from arrival to departure.
